Page 5: Working relationship - proposal 1

Q5

Disagree

Retain a 'working relationship' as a scope of practice requirement for the dental therapy, dental hygiene, oral health therapy and orthodontic auxiliary professions.

Q6

Please comment below on your support or concern.

If a Dental Hygienist is allowed to work unsupervised he or she will be able to offer dental hygiene services that are within their scope of practise to the community at a more affordable expense and refer patients with dental disease to the nearest dentist within that patients community, or surrounding communities. Prescription dental hygiene services can commence; as a preventative oral health service referring patients to seek the services of an independent dental hygiene professional. This works perfectly well in other countries like America. Suitable in regions that have low numbers of dental professionals in a concentrated population, whom experience difficulty to access regular dental care.

Page 6: Working relationship - proposal 2

Q7

Agree

The current working relationship for dental therapy, dental hygiene and orthodontic auxiliary practice be redefined as a consultative professional relationship, in line with oral heath therapy.

Q8

Please comment below on your support or concern.

Utilising the prescriptive dental plan approach allows a dentist with oral health therapists or dental hygienists the ability to refer patients to & fro each other for comprehensive dental/ oral health care.

Page 7: Working relationship - proposal 3

Q9

Agree

The consultative professional relationship be defined as:The arrangement between an oral health practitioner and dentist to provide professional advice about treating and managing patients, within the oral health practitioner's scope of practice. It provides a clear and reliable way for the oral health practitioner to seek advice, and a potential pathway for referral.

Q10

Please comment below on your support or concern.

If patients agree to see there dentist annually and dentist does not offer a dental hygienist on their staff, it seems logically to allow patients to seek the services of a dental hygienist or therapist as part of allowing full access of care to all future dental patients and a preventive oral health tool, thus lowering overall the decay rates of the different regions through a means of available education, and basic dental hygiene preventive services. Cleanings, sealants, OHI and dental hygiene product availability.

Page 8: Working relationship - proposal 4

Q11

Agree

A signed written agreement is no longer be required for dental therapy, dental hygiene or orthodontic auxiliary practice, as it is anticipated that practitioners will reliably meet their responsibilities in the consultative professional relationship, consistent with the position held for oral health therapy. Practitioners may still choose to have a written agreement, or employers may require one.

Q12

Please comment below on your support or concern.

option is nice but shouldn't be compulsory.

Page 9: Working relationship - proposal 5

Q13

Agree

Describe the current working relationship for dental technology and clinical dental technology practice as a professional relationship between a technician and other health practitioners, to acknowledge the professionals involved and the oral health practitioners' professional obligations under the standards framework.No changes to the nature of this relationship are proposed, or to the current professional responsibilities of practitioners in this relationship.

Q14

Please comment below on your support or concern.

these professionals listed above should be in good communication with each other when they are treating the same patient to make the products generated by such technician work optimally for the patient that is receiving the care.

Page 10: Working relationship - proposal 6

Q15

Agree

Remove the multiple 'working relationship' practice standards from the standards framework for oral health practitioners, and to publish the following two guidance documents to help practitioners understand and meet their professional relationship responsibilities: Guidance for the consultative professional relationship between an oral health therapist, dental therapist, dental hygienist, or orthodontic auxiliary and dentist/dental specialist Guidance for the professional relationship between a dental technician or clinical dental technician and other health practitioners

Q16

Please comment below on your support or concern.

well stated above!

Page 11: Practising conditions for dental hygiene activities - proposal 7

Q17

Agree

All activities in the dental hygiene scope of practice be performed within a consultative professional relationship without the need for clinical guidance or direct clinical supervision for the administration of local anaesthetic and application of prescription preventive agents. Direct clinical supervision will remain for dental hygienists undertaking orthodontic activities currently specified as being performed under direct clinical supervision.

The specific requirements for the dentist to: implement the orthodontic treatment plan; be responsible for the patient's clinical care outcomes; and be on-site at the time of the orthodontic activities being performed, to be included in the relevant scope activity description.

Q18

Please comment below on your support or concern.

stated as so seems to be logically and deemed necessary at this time due to the increasing population in relationship to the limited dental hygienists per region overall.

Page 12: Practising conditions for dental hygiene activities - proposal 8

Q19

Agree

The clinical guidance and direct clinical supervision definitions to be removed from the hygiene scope of practice.

Q20

Please comment below on your support or concern.

this has been stated in previous questions. Strongly agreed!

Page 13: Practising conditions for dental hygiene activities - proposal 9

Consultation on proposed changes to the working relationship requirements for oral health practitioners with dentists, and the practising conditions for dental hygiene activities

Q21

Agree

Update the Medical Emergencies practice standard to require dental hygienists to have access to and obtain the necessary training to safely administer adrenaline (1:1000) to manage an anaphylactic event (with an implementation period of a year to allow for training to occur).

Q22

Please comment below on your support or concern.

sounds logically and reasonable.

Page 14: Practising conditions for dental hygiene activities - proposal 10

Q23

Agree

Update the dental hygiene scope of practice with the following activity being performed within a consultative professional relationship: obtaining and reassessing medical and dental oral health histories

Q24

Respondent skipped this question

Please comment below on your support or concern.

Page 15: Practising conditions for dental hygiene activities - proposal 11

Q25

Agree

To not replicate the guidance ('should statements') in the current dental hygiene working relationship relating to a patient's initial assessment into the new consultative professional relationship guidance document. The new consultative professional relationship guidance document contains the following guidance: Identify any specific circumstances where you expect the oral health practitioner will ask for professional advice or assistance, for example: The interpretation of significant or complex medical histories and their potential influence when providing oral health care, including when planning to administer local anaesthetic.

Page 16: Minor scope changes for orthodontic auxiliary practice for consistency across activities

Consultation on proposed changes to the working relationship requirements for oral health practitioners with dentists, and the practising conditions for dental hygiene activities

Q27

Disagree

Make minor wording changes to the orthodontic auxiliary scope of practice to align the description of the same activities across the relevant scopes of practice.

Q28

Please comment below on your support or concern.

unsure if this is necessary.
