

Good morning,

As part of the consultation our submission is:

For a non-vaccination patient we can suggest if they want to get a Covid test within 72 hours then they would be treated as any other patient but if they choose not to they would be moderate risk with different PPE, stand down times etc so would there be a problem in an extra charge to cover our time/materials? Also if the patient were to seek a test would they have to pay for it as they are non-symptomatic?

Kind regards
